

Serial No.: 08/996,768

Atty. Docket No.: 10503/P61750USO

- contacting the material ~~[of]~~ or object with a sample of whole blood from human or animal donors for a period in a manner required to produce adequate blood response [whereby].

B' word

wherein the sample of whole blood is a thawed cryopreserved unit ~~—[derived from]~~ of whole blood that contains an anticoagulant, said cryopreserved unit being one of a large number of identical cryopreserved units of one lot of ~~[anticoagulants-containing]~~ whole blood containing said anticoagulant, and

- ~~[determining]~~ detecting and/or measuring the immunofunctional, toxic, and/or modulatory reaction of the sample of whole blood [response] to said material or object by biological, physical, chemical, and/or physicochemical methods.

20 (amended). The method according to claim 19 for ~~[determining immune-related data]~~ detecting and/or measuring the immunofunctional reaction.

B²

25 (amended). In a method of testing a material or object for human applications by detecting and/or measuring an immunofunctional[-], toxic[-], or modulatory ~~[blood-reaction]~~ blood reaction against the material or object comprising

(i) contacting said material or object with a blood sample from a human or animal and

(ii) ~~[determining]~~ detecting and/or measuring the ~~[blood-reaction]~~ blood reaction by

b²
word.

a biological, physical, chemical, or physicochemical method, the improvement wherein the blood sample is a thawed cryopreserved unit in accordance with claim 21.

27 (amended). In a method of testing a material or object for human applications by detecting and/or measuring an immunofunctional[-], toxic[-], or modulatory [blood-reaction] blood reaction against the material or object comprising (i) contacting said material or object with a blood sample from a human or animal and (ii) [determining] detecting and/or measuring the [blood-reaction] blood reaction by a biological, physical, chemical, or physicochemical method, the improvement wherein the blood sample is a thawed cryopreserved unit in accordance with claim 22.

b³

28 (amended). In a method of testing a material or object for human applications by detecting and/or measuring an immunofunctional[-], toxic[-], or modulatory [blood-reaction] blood reaction against the material or object comprising (i) contacting said material or object with a blood sample from a human or animal and (ii) [determining] detecting and/or measuring the [blood-reaction] blood reaction by a biological, physical, chemical, or physicochemical method, the improvement wherein the blood sample is a thawed cryopreserved unit in accordance with claim 23.

29 (amended). In a method of testing a material or object for human applications by detecting and/or measuring an immunofunctional[-], toxic[-], or modulatory [blood-reaction] blood reaction against the material or object comprising
